

An example of three Genesis *Kinds*, pre-Flood and post-Flood

“In the field of zoology a very good illustration of descent with variation is furnished by the domestic pigeon. The diversity in form and temperament to be found among strains of pigeons would stagger our belief in their common origin if we did not know that they have all been developed from the wild rock pigeon of European coasts, *Columbia livia*. It is extremely interesting to see the variations from the ancestral form which are exhibited in such strains as the pouter, the leghorn runt, the fantail, the tumbler, the owl, the turbit, the swallow, the carrier, the nun, the Jacobin, and the homer. Different “species” names and possibly even different “generic” names would certainly be assigned to some of these if it were not known that they are merely strains of a common stock.
